

Considering having a skin lesion or capillaries removed using a method of high and radio frequencies? You have come to the right place. We love getting rid of various skin lesions, lumps & bumps - the harmless but unsightly irregularities.

WHY REMOVE A SKIN LESION: Most skin lesions do not cause any serious problems and people remove them for practical or cosmetic reasons.

REMOVAL METHOD: Clinical Skin Clear device (developed by Dr Hubert Lam), is a unique radio frequency & high frequency instrument for the effective treatment of a wide range of common minor skin irregularities. It takes minutes to treat a lesion, produces instant results and works without penetrating the skin's surface. Although on occasion 2-3 sessions may be needed to be performed, most lesions require just one session for a successful outcome.

TYPES OF LESIONS:

telangiectasia / capillaries	milium cysts	xanthelasma
cholesterol deposits	skin tags	clogged pores
cherry angiomas	pimples	spider naevi
fibromas		acne lesions

BEFORE THE PROCEDURE: You must obtain the signed doctor consent form to make sure the lesion is not cancerous and is safe for removal (see page 2).

AFTER THE PROCEDURE: Once the procedure is completed no dressing is required. Medicated powder (available at the clinic/chemist) is applied. You must keep treated area/ wound as dry as possible for about a week. Lesion scabs and the scab takes 1-2wks to naturally fall off. You may be left with some discoloration in the area (pinkness) & that can take 3-8wks to go away (healing time varies)

10 HOME CARE TIPS:

1. Post treatment, the areas that were treated may feel Irritated, tender or red
2. Temporary scabbing may form. Do not pick at the scabs, allow them to fall off naturally
3. Remember that prematurely removed scabs may cause hyperpigmentation or scars
4. No hot showers for 48 hours. No swimming (pool/ocean) for 2 weeks. Use medicated powder to keep area dry
5. If the area is irritated apply some medicated powder or, occasionally hydrocortisone cream.
6. Keep the area dry during the day. Pat area dry, do not rub as it may remove the scab prematurely
7. Do not expose area to direct sun. Apply sun block during the day, even in winter, cloudy & rainy days
8. Avoid direct sunlight during peak hours (11am – 5pm). No peeling/ bleaching products for 28 days
9. Clean face and shower, using mild products with no alcohol
10. Make sure you are back for complimentary review 8 weeks post treatment

RESULTS/ REPEAT SESSIONS: Treatment has a high success rate, although results may vary. Usually, smaller lesions will not come back but bigger/deeper lesions may return soon after treatment or in a little while. **IMPORTANT NOTE: Subsequent procedure is the same as the original one. Repeat procedure attracts repeat charge.**

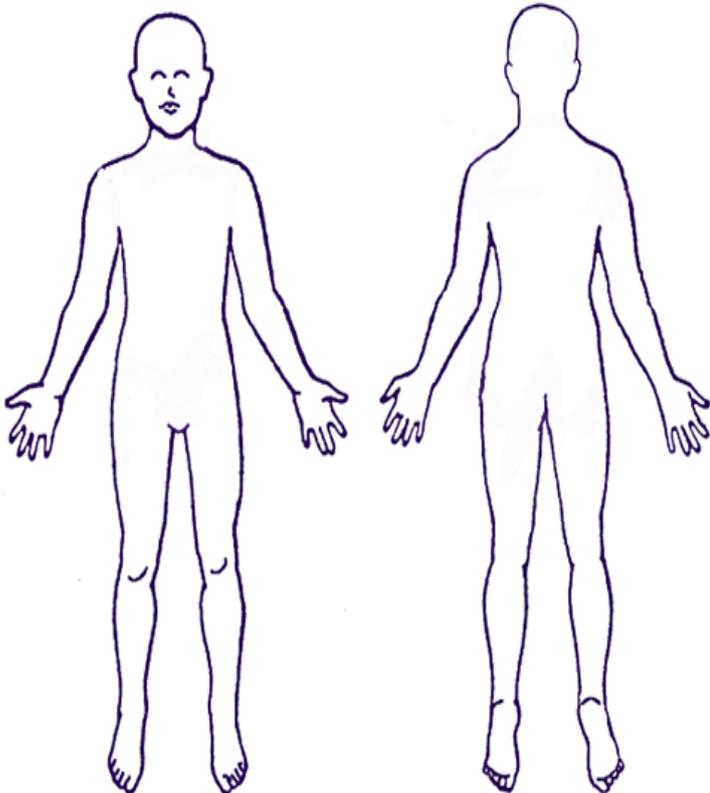

DOCTOR CONSENT FORM

PATIENT'S NAME:

DATE:

I have examined the above patient's skin lesions / moles (*circle all that apply*) on
(specify & mark area/s)

.....
and found none of them suspicious. In my opinion lesions are non-malignant & can
be removed. **lesions that can be removed are specified above or marked below**

DR'S STAMP & PROVIDER NUMBER

DOCTOR SIGNATURE:

.....

Read & Tick "I am requesting to have my mole/skin lesion removed for cosmetic reasons. I understand that there is a possibility that the mole/skin lesion may not respond to treatment or return at later date. I agree not to hold the clinic and/or the doctor liable should this happen. I understand this letter is **valid for 6 months**"

..... (patient sign here) (date)

Letter will not be accepted without dr stamp, privoder number & signature
